Literature curation
Proposed work
1 · Original Moringa radiobiology study
DCM seed and leaf extracts
V79, DU145, MCF-7; 0 and 2 Gy
Crystal-violet proliferation
2 · Public radiogenomic data integration
CLARIFi clonogenic SF2 at 2 Gy
DepMap expression; Cellosaurus
MSigDB Hallmark: 50 scores
3 · Explainable ML benchmark
Tissue baseline vs + expression
Nested CV grouped by related lines
Five models, M0 to M2P
4 · Pathway and cell-line triage
Importance on held-out rows
Cell-line discrepancy review
Prespecified, capped tiers
5 · Moringa compound prioritisation
Seed and leaf constituents
Extract evidence kept separate
Four dimensions, 0 to 8 points
6 · Proposed experimental validation
Profile the original extracts
Purified compounds, clonogenic
Matched normal and tumour cells
